BREIL

Size Guide – Stylize

Wrist size (cm)	Diameter (cm)
Up to 17	5.6
Up to 18	6.2

How to measure your wrist

Finding the exact circumference of your wrist is quick and easy, and it helps you choose the piece that fits you best. A good fit isn't just about comfort – it also affects how the piece looks on you. Take a moment and follow these simple steps to find your ideal size.

Using a soft tape measure

If you have a flexible tape measure on hand, it's the quickest and most accurate option:

- Wrap the tape around your wrist, just below the wrist bone, keeping it snug but not tight.
- Note the exact point where the tape overlaps itself: that's your circumference.

That's it! Now you know the right size for your bracelet.

Without a tape measure

Don't have a flexible tape measure at home? No problem: you can still get an accurate measurement with a few everyday items.

- Grab a piece of string, ribbon, or even a thin, non-stretchy strip of paper.
- Wrap it around your wrist and mark the point where the ends meet.
- Lay the string flat against a ruler and read off the measurement in centimeters.

A simple alternative that works just as well!
